12<sup>th</sup> April, 2023

**BreakthrU, CannedWater4kids &  
Stonehouse Water Technologies LLC,  
USA.**

Dear Team,

RE: **THANK YOU FOR WATERPOD PROJECT DONATION AND INSTALLATION**

On behalf of the Central College Mityana Community, I, the Deputy Head teacher, would like to thank the entire team at BreakthrU, CannedWater4kids and Stonehouse Water Technologies, USA for the great and groundbreaking contribution of donating the WaterPOD at our school, the first of its kind in the country, and ensuring its installation from start to its launch.

We truly appreciated the way the project was prepared, how each technical requirement, process and procedure was handled by the local technical team, and I must say that we are truly impressed and very thankful.

Special thanks to Dr. Moe Mukiibi, Eng. Shaff Tebusweke, and the local team for the inspirational and motivational talk they gave to the students in line with the water industry and its associated challenges and opportunities. This greatly aroused the students' consciousness and attitude towards water for all humanity. The students are very thankful to the new approaches you used during the water, sanitation and hygiene talk and indeed this is something unique that we have been looking for but lacked the means and techniques on how to go about it.

It is a month since the WaterPOD was installed at our school and indeed value addition has been achieved. Over 3,000 students and 200 plus staff members now have access to clean safe drinking water and they are excited about it. We have not experienced any water related diseases registered at the school's medical unit and this has helped us keep the overall medical expenses at the very minimum.

On 12<sup>th</sup> March 2023, we held a parents-teachers' meeting and unveiled this great and generous donation and work of your hands you did for our school. We already see that there's no more littering of mineral water bottles at the school as the parents can now save and put the money they were using to buy bottled water to other uses such as buying more reading, learning and instructional materials for the students. Overall, the WaterPOD has greatly reduced the use of plastic bottles at school that were a source of pollution to the environment and also caused blockage to the drainage system.

The great success of the WaterPOD project at our school has paved the way for many other opportunities such as holding class-based water research programs and competitions which we will integrate in our learning programs. We are committed to ensuring that the WaterPOD stays well maintained and safe.

Once again, we would like to express our sincere thanks to everyone who contributed towards the success of the WaterPOD project at our school; the kind heart of giving back to society, talent, efforts and skills are truly admired and appreciated. Indeed, the quality of your work clearly sets you apart from the crowd. May God bless you.

Yours Sincerely,

MOSES KAFUKO

**DEPUTY HEAD TEACHER**
